to who this may concern

I, Paul Raymaekers of rEvo rebreathers

have reviewed the diver and instructor minimum training standards provided by TDI at the following levels:

- Air Diluent
- Air Diluent Decompression
- Mixed Gas
- Advanced Mixed Gas

I approve the standards as provided to me by TDI for training on rebreathers manufactured by rEvo, if they are used in conjunction with the rEvo minimum training standards, so that the minimum training standards of both TDI and rEvo are always respected. (example: minimum in water time, number of dives, duration of theory lectures, maximum ratio student / instructor etc.)

Paul Raymaekers
